

Specification Sheet

Description **Piusi MC Box Management Terminal** Part No: **PIUSI-0001**

The Piusi MC Box Fuel Management terminal is compact, easy to install and can be connected to a diesel dispenser ensuring fast and precise dispensing by authorised personnel. The Piusi unit can record the date, time and amount of fuel dispensed for the last 255 transactions.

As well as fuel monitoring, it also provides fuel security by only giving authorised users access to the tank's contents.

The standard version of this fleet fuel management system can monitor up to 50 users, although a version for controlling 120 users is available. Using either a pin code system or the electronic data keys available, this system is set up at the unit. The transaction data can be viewed from the fuel management system's screen. However, there is additional Self Service Desk software that allows the data to be exported to a computer. The MC Box Fuel Management Systems can be fitted to a wall, directly onto the tank or on a stand-alone pedestal (optional extra).

Standard Features:

- ❖ Controls up to 50 or 120 users (depending on model)
- ❖ Fuel monitoring features
- ❖ Local memory of 255 transactions
- ❖ Available in 12v/230v
- ❖ Requires pulse meter input
- ❖ Can activate pump via nozzle switch

Optional extras available contact Fuelchief directly.

Model	Piusi MC Box	Protection Class	IP55 suitable for outdoor use
Users	Up to 120 depending on the model	Display	Twin back lit LCD alphanumeric display
Memory	Local memory of 255 transactions	Accuracy	±0.5%
Voltage	230v	Records	User, Date, Time, QTY, Mileage, Reg No
