Standard Features of a DC Slimline Series Diesel Tank

- No Internal Bracing

Internal bracing is an attraction for diesel bug, and is very bad for the quality of your fuel, but most of all it can be a health and safety hazard when it comes to servicing the tank. At Fuelchief we have redesigned the way our tanks are built so they do not include internal bracing, making them stronger and avoiding the hazards.

- Sloped Floors

All the tanks in our DC Series have sloped floors, meaning that any condensation will pool at the lowest point in the tank, making the testing and retrieval process simple. If the base of the tank is flat, the water will spread across the entire floor area, making the retrieval process difficult.

- Extra Security

All tanks in our DC Series have full height doors to access the pump bay which are secured with a 3-way locking system and anti-levering design to provide extra security. This, along with the lockable access hatch and fill-point will assist with the prevention of fuel theft.

- Marine Grade Paint

All tanks are painted with a Hempel C4-H marine grade paint system with an anti-rust underseal. Marine grade meaning that harsh elements such as sea salt spray don't harm the outer look of the tank, allowing for longevity and durability.

- 15 Year Warranty

Fuelchief guarantee the DC Slimline Series tanks to be free from defects in material and workmanship for 15 years from the date of shipment provided installation and servicing guidelines are adhered to.* Conditions Apply.

- As Standard Supplied With All Accessories

As standard, each tank is supplied with a mechanical overfill protection valve, vent, dipstick, fill-point, an access platform ladder, and a bund alarm.

The Sapphire Online FMS uses real-time reporting to closely monitor fuel consumption. Reports can be viewed in the Total Site Manager (TSM); a cloud based web portal. Using PIN, card and/or contactless key tags, the Sapphire uploads each transaction to the TSM the minute the nozzle is returned to the holster. It will control up to 4 pumps, allowing them to all operate at the same time while the system records the information.

The Everlink AFM FMS allows you to dispense multiple fluids from a single master controller. It's cloud-based administration software eliminates any need for a dedicated server or PC. This will enable the system to be accessed by multiple staff members at one time, and eliminate the need for backups. Advanced reporting features and easy access to historical data are just two of the many features of the software.
